Upgrades

RAM Upgrade

Adding RAM SIMMs to the standard RAM in your Phaser 480X increases the printer's power and performance. With additional memory, the Phaser 480X can print colour separations, print with a 4-Colour Transfer Roll and print larger, more complex images. More memory means more productivity.

16-Mbyte RAM SIMM (480 or 480X) **4685F16**

32-Mbyte RAM SIMM (480X only) **Z480F32**

Phaser 480 to 480X Upgrade

Upgrade your Phaser 480 to the 480X to get the added functionality of colour separations, trapping functions, and DCS support. Also new is the Phaser Match colour calibration software. These new additions give you the tools you need to fine tune your prints. Installation is free with the upgrade. (96 Mbytes RAM is required to use added functionality.)
